

MEMO - SECURING ROOM DOORS

BOH-Doors (Back of House Doors), VIP-Areas, Staff-Rooms, etc. can be controlled by the MEMO System for a convenient ONE-KEY-4-ALL policy. The READER is usually installed in the wall near to the door knob, integrated in the wall cladding or behind a cover. The 0312 Lock is an electric strike that is installed in the door frame, hence the lock cables only need to be passed to the frame and not the door.

ATTENTION: Fulfilling local and international security regulations is the TOP priority. Irrespective of the application, it must always be possible to escape a room from the inside by mechanical means.

Components

- ① 1x Controller
- ② 1x Power Supply
- ③ 1x Reader
- ④ 1x 0312 Lock

Outside

An authorized key must be presented to the reader to enter this room from the outside. The lock is activated and the door can be pulled open from the door knob.

Inside

Pushing the door handle down opens the door – even in case of power fail and emergency, the mechanical handle from inside must open the door.

Available Products

Article Number	Product Name	Description
MI-MMV0-0312-12	Electric Strike Level 0	el. Strike with assembled cable connection, no faceplate
MI-MMV1-0312-12	Electric Strike Level 1	el. Strike with DOOR SENSOR and assembled cable connection, no faceplate

MI-MMV-F0312-00	Flat striking plate for 312	Face Plate for Electric Strike short

MEMO - SECURING ROOM DOORS WITH 3RD PARTY ELECTRIC STRIKE

BOH-Doors (Back of House Doors), VIP-Areas, Staff-Rooms, etc. can be controlled by the MEMO System for a convenient ONE-KEY-4-ALL policy. The READER is usually installed in the wall near to the door knob, integrated in the wall cladding or behind a cover. A 3rd party electric strike can be installed in the door frame, hence the lock cables only need to be passed to the frame and not the door.

ATTENTION: Fulfilling local and international security regulations is the TOP priority. Irrespective of the application, it must always be possible to escape a room from the inside by mechanical means.

Components

- ① 1x Controller
- ② 1x Power Supply
- ③ 1x Reader
- ④ 1x 3rd Party Electric Strike
- ⑤ 1x Connection cable
- ⑥ 1x 3rd Party Power Supply

Inside

Pushing the door handle down opens the door – even in case of power fail and emergency, the mechanical handle from inside must open the door.

OUTSIDE

An authorized key must be presented to the reader to enter this room from the outside. The lock is activated and the door can be pulled open from the door knob.

The system uses its own power supply for the door opener and switches the signal via the controller - a different cable is used for this purpose - and in this case another door opener can be used with a different voltage

Available Products

Article Number	Product Name	Description
MI-CAB1 5000 03	Cable 3m for magnetic lock	Connection cable for 3rd party lock to controller

MEMO - SECURING ROOM DOORS BY PIN CODE

Some rooms shall be opened with PIN Code only, e.g. when keys are stored in that room over night, access in the morning must be possible without presenting a key to the reader – this can be done via Keyboard.

» **ATTENTION: Fulfilling local and international security regulations is TOP priority. Irrespective of the application, it must always be possible to escape a room from the inside by mechanical means.**

Components

- ① 1x Controller
- ② 1x Power Supply
- ③ 1x 0312 Lock
- ④ 1x 12Button Terminal Wallmount

OUTSIDE

A valid PIN CODE must be typed at the keypad to enter this room from the outside. The lock is activated and the door can be pulled open from the door knob.

INSIDE

Pushing the door handle down opens the door – even in case of power fail and emergency, the mechanical handle from inside must open the door.

Available Products

Article Number	Product Name	Description
MI-HDT1-0002-12	12 Button Handterminal	Keypad, wallmount, 1,8m cable connection to Controller
MI-HDT1-0011-12	Handterminal Extension Cable	1,8m length, aluminum mounting bracket

APPLICATION EXAMPLE

MEMO - CONTROLLING A SLIDING DOOR

Some areas – like display windows - shall be closed with sliding doors, for elegant design, locks must be invisible. In that case we recommend lock type MI-MMV0-2600-12.

ATTENTION: This solution can only be applied when the compartment / room can NOT be entered by humans. To fulfil local and international security regulations must be TOP priority. To escape a room, even when electricity fails, must be considered when planning such an application.

Components

- ① 1x Controller
- ② 1x Power Supply
- ③ 1x 2600 Lock
- ④ Reader

OUTSIDE

To open a compartment, an authorized Key must be presented at the reader to slide the door open.

MI-MMV1-2600-12	Sliding Door Lock	

MEMO - CONTROLLING A HINGE DOOR - FAIL SAFE = OPEN WITHOUT POWER

Some designs require hinge doors without any handle and locks must be invisible. In that case we recommend lock type MI-MMV0-0321-12R. This lock opens automatically when power is off.

ATTENTION: To fulfil local and international security regulations must be TOP priority. To escape a room, even when electricity fails, must be considered when planning such an application.

Components

- ① 1x Controller
- ② 1x Power Supply
- ③ 1x 0321R Lock
- ④ 1x Reader Outside
- ⑤ 1x Reader Inside

Outside

To open a compartment/room, an authorized Key must be presented at the reader to pull the door open.

ATTENTION: In case of Power Fail the lock opens automatically and products are not secured anymore!

Inside

To open a compartment/room, an authorized Key must be presented at the reader to push the door open.

ATTENTION: In case of Power Fail the lock opens automatically and the door can be opened, a person can exit!
